

LIAN PLASENCIA

SUMMARY

Senior Software Engineer & Team Lead with 13+ years of experience delivering robust applications, beginning with impactful development initiatives during university. Expert in managing the full software development lifecycle (SDLC) from initial analysis through automated testing and deployment. Proven track record of leading high-performing engineering teams, introducing process optimizations, and exploring cutting-edge technical solutions. Recognized as a supportive, collaborative teammate who fosters a positive workplace culture.

EXPERIENCE

End User Development Project Supervisor, 09/2024 - Current UPS - Louisville, KY

- Lead Full-Stack Developer — Spearhead the end-to-end development of business-critical internal platforms, driving the full lifecycle from requirements gathering and Figma UI/UX prototyping to backend architecture and cloud deployment. Architect high-performance microservices using .NET 8 and modern Angular 20 frontends (successfully migrated from Angular 12) to streamline complex enterprise workflows. Drive technical innovation by integrating Large Language Models (LLMs) for advanced vector search and tool calling, while optimizing application reliability through Hangfire, Quartz, Ocelot API gateways, and SendGrid. Manage robust backend data infrastructure using SQL Server and ensure seamless, scalable delivery across Azure cloud environments.

Senior Software Development Engineer, 05/2023 - 04/2024 UKG - Montevideo, Uruguay

- Full-Stack Developer — Contributed to the engineering and deployment of the global Great Place to Work HUB, developing a highly resilient monolithic application leveraging Kotlin on the backend and Angular on the frontend. Architected high-scale data streaming and synchronization pipelines across distributed worldwide instances using Kafka and Google Cloud Pub/Sub to ensure seamless multi-tenant data replication and low-latency global availability. Managed complex enterprise integrations by connecting core services within the ServiceNow ecosystem, optimizing high-volume data consumption from MongoDB, and orchestrating cloud-native services deployed across distributed Google Cloud Platform (GCP) environments.

SDE II Manager, 05/2022 - 05/2023 NTSprint - Seattle, WA

- Full-Stack Developer & Engineering Team Lead — Promoted to leadership role to manage a cross-functional development team and oversee up to six concurrent, multi-industry software projects

SKILLS

- Project Management
- Team Leader
- Software Architecture
- .NET Core
- .NET Framework
- Kotlin
- Python
- Angular
- React
- SQL Databases
- NoSQL Databases
- Agentic AI
- DevOps
- Microsoft Azure
- Amazon Web Services
- Google Cloud Platform
- UI/UX Design
- Figma
- Bootstrap
- UI Material
- Angular Material
- DevExpress
- Hangfire
- Quartz
- Ocelot
- SignalR
- RabbitMQ
- Kafka
- PubSub
- Stripe
- Paypal

(including US healthcare client Cerapedics, fintech/betting, and HR management). Architected and delivered scalable solutions, transitioning legacy monolithic APIs into high-performance microservices built with Python, .NET Core, Angular, and React, with later mobile extensions as Progressive Web Apps (PWAs). Owned the complete delivery lifecycle by gathering requirements directly from clients, designing UI/UX prototypes in Figma, estimating budgets, and establishing CI/CD pipelines across AWS and Azure. Optimized distributed system performance and real-time visualization by implementing Kotlin backend microservices utilizing GCP Pub/Sub, webhooks, and data lake integrations, while building background task queuing and caching systems using RabbitMQ, SignalR, Quartz, Hangfire, and Redis.

Senior Software Engineer, 09/2013 - 05/2022

**Information Technology and Automation Company - Sancti Spiritus,
Cuba**

- Full-Stack Developer — Engineered high-availability desktop and full-stack web applications integrated directly with SCADA servers to power the critical operations network of the National Electric Union. Designed and optimized real-time data transmission systems utilizing ASP.NET, .NET Framework, and WebSockets to deliver low-latency telemetry essential for grid-level decision-making. Built reactive user interfaces by leveraging Angular, DevExpress, Bootstrap, and Angular Material, ensuring seamless data visualization for system operators. Managed relational data infrastructure via SQL Server, implementing SQL Dependency mechanisms to drive event-driven, automated data updates across the enterprise platform.

- Sendgrid
- Intuit
- QuickBooks
- SQL Dependency
- SCADA
- 3ds MaxScript
- Unreal Engine
