

LIAN PLASENCIA

SUMMARY

Lead Full-Stack Engineer and Tech Lead since 2013 architecting enterprise software across Healthcare, Logistics, and Energy. Expert in Event-Driven Microservices using .NET Core, Angular, React, Kotlin and Python, alongside strong capabilities in C++ and Unreal Engine. Proven track record deploying Agentic AI and predictive models onto hybrid clouds like AWS, Azure and GCP.

EXPERIENCE

End User Development Project Supervisor, 09/2024 - Current UPS - Louisville, KY

- Supervised and executed the end-to-end development life cycle of critical warehouse management software for UPS's Healthcare division, gathering requirements from business stakeholders and designing high-fidelity UI/UX mockups in Figma.
- Architected and developed an advanced Agentic AI system inside a custom .NET backend, utilizing RAG, tool calling, and Redis caching to dynamically generate queries on the fly, optimizing client cargo workflows and space utilization.
- Engineered sophisticated forecasting algorithms to predict future warehouse capacity and volume requirements, displaying real-time predictive analytics on operational dashboards built with Chart.js and embedded PowerBI.
- Spearheaded a major architectural migration of a core operational microservice, successfully upgrading the frontend from Angular 12 to Angular 20, maintaining system availability for critical supply chain workflows.
- Designed and controlled warehouse automation software to manage inventory, specialized storage racks, packing, and shipping pipelines for high-value medical equipment and temperature-sensitive pharmaceuticals within strict Cold Chain Logistics environments.
- Modeled robust database structures in SQL Server, optimizing complex store procedures, views, functions, and automated SQL Jobs, while establishing asynchronous background tasks via Hangfire and building specialized on-call visualization monitoring.
- Enforced strict code quality and security standards by integrating SonarQube analysis into the development lifecycle, writing comprehensive automated test suites, and leading continuous cloud deployments onto Azure.

Senior Software Development Engineer, 04/2024 - 09/2026 Maxdesign3d (Freelance) - Remote, USA

- Conceptualized and engineered the entire e-commerce ecosystem from scratch, handling the end-to-end SDLC including requirement gathering, UI/UX design, full-stack development, QA testing, and DevOps deployment.
- Developed two independent, high-performance web applications—the storefront and the administrative control panel—using Angular 22 on the frontend and a robust REST API powered by .NET 9.

SKILLS

- Project Management
- Team Leader
- Software Architecture
- C#
- TypeScript
- JavaScript
- .NET Core
- .NET Framework
- Kotlin
- Python
- Angular
- React
- SQL Server
- PostgreSQL
- SQLite
- MySQL
- MariaDB
- MongoDB
- Cosmos DB
- Dynamo DB
- Firebase
- AI Integration
- Agentic AI
- Chatbots
- RAG
- Vector Search
- Tool Calling
- GitHub Copilot
- Claude Code
- OpenAI
- DevOps

- Architected an advanced Agentic AI system featuring a frontend chatbot and a backend engine that generates embeddings to perform high-speed vector searches using RAG architectures and Redis caching.
- Integrated specialized AI APIs to streamline real-time data embedding, translation services, and contextual Retrieval-Augmented Generation based on natural language user prompts.
- Designed a custom server-side asset packaging pipeline that dynamically compresses purchased 3D models and animations into secure .rar packages for seamless, high-volume customer downloads.
- Optimized web performance and visual asset rendering by leveraging lightweight WebP formats to deliver ultra-smooth 3D model previews and high-fidelity animations without compromising load times.
- Integrated global payment infrastructure and customer relations services by implementing PayPal for international checkout transactions and Brevo for marketing and support workflows.
- Established automated CI/CD pipelines using GitHub Actions and custom self-hosted runners to migrate and deploy application infrastructure from AWS over to a Contabo VPS environment.

Senior Software Development Engineer, 05/2023 - 04/2024

UKG - Montevideo, Uruguay

- Engineered and scaled the Great Place to Work Hub service, implementing high-availability features for a global, multi-tenant cloud architecture across GCP and On-Premise environments.
- Designed and developed cutting-edge Agentic AI solutions utilizing RAG and tool calling capabilities with Redis cache, enabling automated web searching and generation of actionable insights for HR and WFM leaders.
- Architected and optimized an event-driven ETL data pipeline using BigQuery, Kafka, and GCP PubSub to efficiently extract, transform, and populate large-scale datasets into MongoDB.
- Led the integration of enterprise-level Service Now endpoints, streamlining data synchronization and internal workflows between internal systems and client tenants worldwide.
- Developed robust microservices and interactive user interfaces leveraging Kotlin on the backend and Angular on the frontend, enforcing clean code architecture principles.
- Elevated engineering team standards by conducting rigorous code reviews, mentoring junior developers, and collaborating closely on UI/UX design validation to ensure accessible and intuitive user workflows.

SDE II Manager, 05/2022 - 05/2023

NTSprint - Seattle, WA

- Led the end-to-end SDLC for multiple client projects across Healthcare, Fintech, Real Estate, and E-commerce, progressing from Full-Stack developer to an engineering leadership role.
- Managed client relations and product discovery initiatives, gathering business requirements, conducting system analysis, creating interactive Figma UI/UX prototypes, and producing accurate technical scoping and project estimates.
- Overheaded project management and technical execution, translating complex business needs into developer backlogs, managing task assignments, mentoring engineers, and making final architecture

- Microsoft Azure
- Amazon Web Services
- Google Cloud Platform
- UI/UX Design
- Figma
- Bootstrap
- Material UI
- Angular Material
- DevExpress

- Videogame Development

WEBSITES, PORTFOLIOS, PROFILES

- <https://www.linkedin.com/in/lianjplasencia>
- <https://github.com/lianjesu/lianjplasencia>

decisions.

- Designed and architected scalable Microservices and Event-Driven systems using .NET Core, Python, Angular, and React, implementing unified API Gateways via Ocelot to handle distributed traffic routing.
- Engineered robust asynchronous messaging and background job scheduling systems utilizing RabbitMQ, GCP PubSub, and Hangfire to guarantee highly resilient, non-blocking data distribution.
- Architected HIPAA-compliant data security frameworks for a flagship healthcare platform (Cerapedics), implementing end-to-end encryption, data de-identification algorithms, and secure key management.
- Developed interactive user interfaces leveraging Angular Material and Material UI, while incorporating real-time engagement channels through SignalR and custom AI chatbots.
- Integrated complex third-party software ecosystems, including payment platforms (PayPal, Stripe), business tools (QuickBooks, PowerBI), communication services (SendGrid, Sendinblue) and regulatory APIs (NHTSA, Google Maps).
- Modeled and optimized polyglot persistent database systems across relational and NoSQL engines, including MongoDB, CosmosDB, and DynamoDB.
- Streamlined continuous integration and delivery (CI/CD) workflows by building automated deployment pipelines using GitHub Actions and Azure Pipelines onto AWS and Azure cloud environments.

Senior Software Engineer, 09/2013 - 05/2022

Information Technology and Automation Company - Sancti Spiritus, Cuba

- Designed and engineered high-performance .NET desktop and Angular web applications utilizing DevExpress and Bootstrap, ensuring intuitive UI/UX workflows for critical, real-time electric grid operations.
- Architected and deployed robust REST APIs using .NET Core to bridge communication between central operations and SCADA servers, ensuring continuous processing of real-time telemetry data.
- Implemented low-latency, bidirectional data streaming by integrating SignalR, optimizing live event delivery to grid operators across hybrid environments.
- Managed and deployed application infrastructure across AWS cloud environments and On-Premise corporate infrastructure, administering Linux servers and virtualized environments via VMWare.
- Optimized data persistence and transaction speeds across multi-database architectures, efficiently handling high-concurrency workloads using SQL Server, PostgreSQL, and SQLite.
- Automated mission-critical background jobs and data synchronization tasks by configuring Quartz.NET, eliminating processing bottlenecks during peak grid operational hours.

EDUCATION AND TRAINING

Bachelor Sc., Computer and Information Sciences, 09/2008 - 07/2013

University of Informatic Sciences - Havana, Cuba
